

The image shows a Windows desktop environment. In the foreground, a Visual Studio Code editor window is open, displaying the `index.js` file for a React application. The code includes imports for `React`, `ReactDOM`, and `index.css`, and uses `ReactDOM.render` to render a `<Hello />` component into the `root` element. The terminal window below the editor shows the command `pract1 > src > # index.js` and the output `Compiled successfully!`. It also provides the local and network URLs for viewing the application: `http://localhost:3000/had-react-1` and `http://192.168.0.100:3000/had-react-1`. The browser window in the background shows the application running, displaying the text **HELLO WORLD** on a purple background.
